

Notice of Public Community Meeting

For Project Proposals under the Locally-Owned Renewable Energy Projects that are Small Scale Program and the Clean Power Northeast Development Inc. Atlantic Link Project

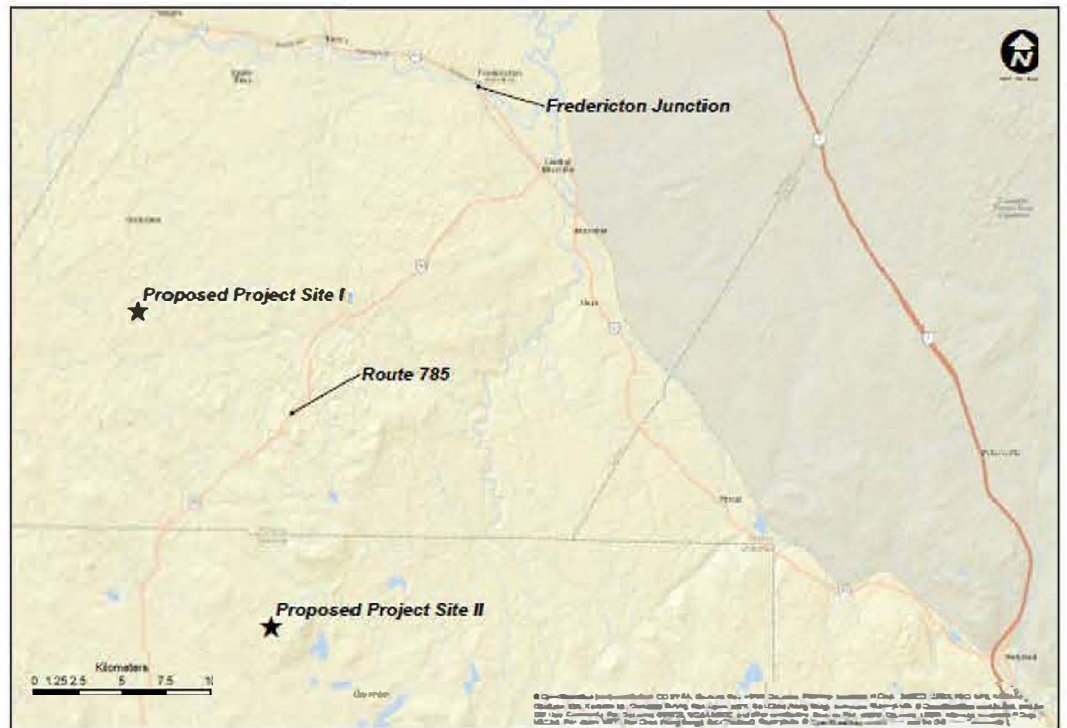

SWEB Development is exploring two project opportunities to design, build, and operate a wind energy project for the generation of electricity. The two opportunities being explored are Component 2 of NB Power's **Locally-Owned Renewable Energy Projects that are Small Scale program (LORESS)**, and the proposed **Atlantic Link** project.

SWEB Development is hosting a **public community meeting** as part of our early community engagement activities to discuss each of these opportunities in further detail. The public community meeting will present information about SWEB, the Atlantic Link project, the LORESS program, early project details, and other related information. We encourage interested parties to attend and provide feedback.

Procurement Details

LORESS – Component 2 is a competitive process for procuring renewable energy projects that are up to 40 MW and are majority-owned by a "Local Entity".

The **Atlantic Link** Project is a request for proposals for 1,000 MW of renewable energy by Clean Power Northeast Development Inc. (a subsidiary of Emera Inc.).

Proposed Location of the two Projects

Approximately 17 km south west of the Town of Fredericton Junction, New Brunswick
